# Size & Measurements

## Sizing & How to fit

- 1. Helmet Ventilation** Active helmet ventilation is adjustable ventilation that you can slide open or close yourself to regulate the heat.
- 2. Hardshell ABS** The ABS (hard shell) outer shell is designed for better impact resistance and therefore provides extra safety.
- 3. In-Mold Technology** The in-mold technology ensures that the helmet is every light in weight, ensuring maximum protection and comfort.
- 4. Shock Absorbing Lining** The breathable and light lining has a shock- absorbing effect and provides extra safety and comfort.
- 5. Goggle Clip** This secures the goggle strap on both sides of the helmet and when the goggle is lifted on to the top of helmet between runs.
- 6. Removable Earpads** Keep your ears nice and toasty. Our removable ear pads provide comfort and warmth on those chilly rides.
- 7. Quick Release System** This provides an easy to use click closure under the chin.
- 8. Size Adjuster** By adjusting the dial at the rear of the helmet, the fit can be optimised as desired.

### HELMET SIZES

Wearing a proper-fitting helmet is the single most impactful thing you can do to prevent yourself from sustaining a serious injury while skiing or snowboarding. In the event of a nasty spill, or even just a minor slip up on the mountain, a helmet that is too large or too small will not adequately protect you. It's simply not worth it to risk injury because the helmet you have is a poor fit, so we are here to give you some tips on how to correctly fit a ski or snowboard helmet.

### HOW TO MEASURE?

Wrap a flexible tape measure around your head approximately one inch above the eyebrows and ears. Use this measurement to find your helmet size in the sizing chart.

### SIZING INSTRUCTION

Your helmet should fit snugly and comfortably on your head. Once straps and pads are adjusted to the proper fit, grab helmet and twist. The skin on your forehead should move with the helmet.

# Gloves & Mittens

Put your hands in good hands with our designed ski gloves and mittens

# gloves & technology

## Gloves vs. Mittens

Gloves, with their individual fingers, offer better dexterity than mittens and are ideal for activities where you need to frequently handle gear, adjust boot buckles and zip zippers. Lightweight gloves are a great choice for aerobic activities, such as cross-country skiing, where your body is generating lots of heat.

Mittens tend to be warmer than gloves because your fingers generate more heat when they're not separated from each other by fabric, as they are with gloves. They aren't as dexterous as gloves but they can still serve you well when you're holding ski poles, carving down the mountain on a snowboard or heading out for a hike in frigid temperatures.

## Gloves Sizes

**NUMERIC SIZES:**  
These are the same as your measurement in inches. Round up or down to the nearest size.

To find out your glove size, measure (in inches) around your hand with a tape measure at the place indicated by the red line (just below the knuckles). You should use your dominant hand, the right if you are right-handed, and the left if you are left-handed.

## Dry-S® Membrane

The DRY-S® mebrane is bonded directly to the glove's shell inner side: rain, snow and wind are blocked on the glove's external surface providing ultimate comfort.

Stops liquid moisture from penetrating, but allows perspiration vapour to escape. Keeps your skin dry and comfortable in most extreme conditions.
